# Green pool advice sheet

*This is a guide only and you may need a service visit.*

## Green pool

1. Fill pool with water to very top
2. Turn pump on and leave on
3. Vacuum pool to waste
4. Brush walls & floor
5. Backwash or clean filter
6. Add 1kg Chlorine per 10,000 Litres
7. Add 100 mls MSA II per 10,000 Litres
8. Add polysheen plus directly to pool
9. Bring pH to 7 – 7.5
10. Fill pool with water to very top

## **48 Hrs later bring water sample to shop**

- Chlorine must have a reading of 10ppm or above.
- Copper must have a reading of 1ppm.
- If the pool is white cloudy this is dead algae and can be removed using Polysheen Plus and Quick Clear and continuous filtering. Alternatively the pool can be flocked using Power Flock or One Shot Flock.

## **Bring water sample to shop**

1. Backwash or clean filter
2. Vacuum pool to waste
3. Brush walls
4. Clean filter again using Filter Brite
5. Balance pool water
6. Set time clock on pump for 8 – 12 Hrs a day

## Note:

- If using Cal-Hypo the pool will stay cloudy longer
- Too little flock will not work and too much flock will have the opposite effect
- All green pools are different what works on one may not work on another
